

Chem\*Star Formulations Presents:

## ***Magnesium – The Miraculous Mineral***

Magnesium is the second most abundant mineral in the body. It is involved in over 200 enzymatic processes, including the production of ATP for energy and optimal rhythmic function of cardiac and vascular muscles. Magnesium deficiency is associated with increased risk of coronary artery disease, sudden cardiac death, myocardial infarction and arrhythmias. Supplementatton of Magnesium may prevent calcification of blood vessels and the development of atherosclerosis. Magnesium supplementation may also reduce total cholesterol, raise HDL cholesterol and prevent platelet aggregation. Magnesium 125™ also provides Malic Acid as a complement to magnesium in the relief of pain associated with muscle spasm and cramping. Magnesium is also essential for supporting optimal bone density, as well as maintenance of blood glucose levels.

Magnesium is also necessary for proper bone formation and magnesium deficiencies have been linked with bone loss or osteoporosis. In fact, most studies show that magnesium supplementation reverses bone loss in a much more efficient way than calcium supplementation ever could. Magnesium can help to eliminate calcium deposits and increase bone mineral density. Other trace elements and nutrients are also necessary for good bone health, but with magnesium's proven benefits, more physicians should be recommending it.

Magnesium 125™ is ChemStar's proprietary blend of Albion's patented form of Magnesium Chelazome, a true chelated magnesium, and the recently introduced, innovative DiMagnesium Malate (patent pending). Albion is the only company that has researched, developed and patented true magnesium chelates. The Albion Gold Medallion displayed on this formula certifies Magnesium 125™ meets the strict requirements for the highest quality in mineral absorption and utilization. *Recommended dosage: 1-3 caps before bed (reduce if laxative effect)*
